RANJIT JANA

FULL STACK DEVELOPER & AI ENGINEER

Kolkata, India | +91 8001801496 | rjranjit099@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Full Stack Developer & AI Engineer with 2+ years of hands-on experience designing, developing, and deploying scalable web applications, SaaS platforms, and AI-powered production systems. Strong expertise across React, Next.js, Node.js, Python, FastAPI, and AWS, with hands-on experience building generative AI pipelines using Stable Diffusion, ControlNet, and computer vision models for real-world catalog and virtual try-on applications. Proven ability to independently own full-stack and AI projects end-to-end, from model integration to production deployment.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3

Frontend: React.js, Next.js, Redux, Zustand, Tailwind CSS, Framer Motion, GSAP, Three.js, AR.js

Backend: Node.js, Express.js, FastAPI, Django, REST API Design

AI / ML: PyTorch, Transformers, Hugging Face & Diffusers, Stable Diffusion, ControlNet, DensePose, OpenPose, MediaPipe, OpenCV, Pillow, NumPy, Pandas, ANN / CNN / RNN

LLM & Quant: LLM Inference, bitsandbytes (Quantization), Float32 / Float16 / BF16 Precision, MCP (Model Context Protocol)

Databases: MongoDB, PostgreSQL

Cloud & DevOps: AWS (EC2, Lambda, ECS, S3, API Gateway, Amplify), Docker, Git

Tools: Postman, Mapbox GL, Figma, Cursor AI

PROFESSIONAL EXPERIENCE

White Dodo | Full Stack Developer & AI Engineer

Apr 2026 – Present

Working mainly on building AI-powered applications for fashion, combining local models such as Grounded SAM with cloud-based models via the Gemini and OpenAI APIs to handle garment detection, segmentation, and image generation. Helped the team build a digital fashion catalog application used to generate garment and model imagery at scale, which increased production output by ~50% after launch. The platform now serves large fashion brands including Myntra and Raymond, supporting their catalog and virtual try-on workflows.

Blownfuse Softlabs Inc, Kolkata — MERN Stack Web Developer

Sep 2025 – Apr 2026

Worked as a full-stack web developer building scalable applications using Node.js, Express.js, React.js and Next.js. Designed and implemented RESTful APIs, request validation and error handling, and tested endpoints using Postman. Developed interactive 2D/3D visualization features with React and Mapbox GL, improving rendering performance by ~35%. Worked with MongoDB and PostgreSQL databases, optimized API consumption and reliability. Built and deployed backend services on AWS including ECS, S3, API Gateway, Lambda (Node.js) and Amplify to support scalable and serverless workflows.

North Star Metrics | Kolkata, India — MERN Stack Developer Intern

Aug 2024 – Jan 2025

Worked on responsive and cross-browser compatible UI using React.js and Tailwind CSS while closely following design specifications. Handled API integration and data rendering across multiple components and maintained clean component structure. Used Redux for predictable state management and smoother data flow across modules. Improved application performance through lazy loading and code splitting, reducing initial load time by ~40%. Collaborated with team members during feature implementation, debugging, and optimization to ensure stable releases.

KEY PROJECTS

AI Fashion Platform — White Dodo (whitedodo.ai)

Apr 2026 – Present

- Led full-stack and AI engineering for White Dodo's in-house AI fashion platform, building tools for virtual try-on, fashion design assistance, texture editing, and swatch-based tile extraction.
- Architected inference pipelines combining ControlNet, DensePose, and Stable Diffusion for garment-on-model try-on image generation.
- Built a single-tile extractor to automatically pull individual fabric tiles from swatch sheets for catalog and texture workflows.

- Implemented bulk catalog generation workflows using automated texture and swatch processing with OpenCV/Pillow and FastAPI batch endpoints.

SaaS E-commerce Platform (augmanta.com) — Lead Full Stack Developer *Nov 2025 – Present*

- Led end-to-end development of a multi-tenant SaaS e-commerce platform, independently handling frontend, backend, and cloud deployment.
- Built a production-grade frontend using Next.js with Server-Side Rendering (SSR), improving SEO, performance, and initial page load speed.
- Engineered RESTful APIs using Node.js, deployed on AWS services to manage users, inventory, and business operations at scale.
- Integrated Role-Based Access Control (RBAC) and JWT-based authentication to secure application access across multiple tenants.
- Integrated web-based Augmented Reality (AR) features to enable real-world product visualization and enhance customer engagement.

Eden Studio — Landscape Architecture Platform, San Francisco, USA *Sep 2025 – Nov 2025*

- Architected and built the Tile Editor module from scratch using React.js and Mapbox GL.
- Optimized preview rendering performance by improving state management and component re-rendering, achieving ~40% faster preview load times.
- Built backend services using Node.js and Django to process layout data and trigger automated 3D rendering workflows.
- Containerized backend services with Docker and integrated AWS ECS-based pipelines to handle server-side Blender rendering and visualization automation.

HTH Tours — Travel Booking Platform (Freelance) (hthtours.com) *Jan 2025 – Mar 2025*

- Built a tour, travel, and hotel booking platform using Next.js, delivering fast performance, full responsiveness, and cross-device compatibility.
- Executed Server-Side Rendering (SSR) and dynamic meta tag optimization to improve SEO performance and search engine visibility.
- Enhanced user experience with smooth animations and transitions using Framer Motion and GSAP.

EDUCATION

MCA — Netaji Subhash Engineering College, MAKAUT CGPA: 7.09 / 10 | Kolkata, WB | 2024

BCA — Garhbeta College, Vidyasagar University CGPA: 7.33 / 10 | Garhbeta, WB | 2022
